## Gps tracker app for android

Disney is quite a big media property these days. They own ABC, ESPN, Marvel, Lucasfilm, and soon Fox. That means there are a bunch of ways to interact with the Disney thing. However, we believe that people looking for Disney apps want the more classic Disney characters and experiences. We can definitely help with that. Disney is again massive. They have movies, TV shows and music across many genres. We can help you find what you're looking for. Here are the best Disney apps for Android: Disney+ Disney Now FANDOM! iHeartRadio Family Internet TV (link to Hulu) Movies Anywhere My Disney Experience Reddit Official Disney apps YouTube Price: Free trial / \$6.99 per month / \$12.99 per month Disney + is the largest Disney app release in recent memory. It has a bunch of Disney shows and movies along with content from Disney-owned properties (like The Simpsons) and some original content like The Mandalorian. It's a massive success for Disney so far, and it's the obvious choice for a list like this. In addition, you can get Hulu, Disney+ and ESPN+ for \$12.99, and that's frankly the best deal in streaming right now. This is easily the best Disney app. Disney Now Price: Free with TV subscriber login Dessar Disney's current streaming service. You log on to the service with your existing TV cable provider information and access a bunch of Disney TV content. It includes children's shows, comics and live action stuff, classic and new Disney characters, and even Radio Disney. Disney+ is an excellent streaming service, but you still get more daily Disney content from this than you do from Disney+ and this still integrates with your cable TV provider if you still have one. Fandom of Wikia Price: Free with ads Fandom of Wikia is a community of enthusiasts who create these small wiki pages for different media properties. There used to be a collection of apps for different fandoms, but there is now a single app with each topic available. The app typically provides information about characters, movies, TV shows, and even some games. It's a great way to learn a little trivia about basically any Disney movie, show or character. Of course, it's quite a niche product. Trivia buffs should definitely try this one. iHeartRadio Family Price: Free / \$9.99 per month There are some different versions of iHeartRadio. But for Disney stuff, we recommend iHeartRadio Family. The hotel has 80 stations with family-friendly music from a bunch of popular children's shows and movies. Of course, it includes plenty of Disney content. You can go with a station dedicated to Disney princess songs or just look up standard Radio Disney for a great mix of music from Disney. Of course, the full version also has all these stations also so current fans of iHeartRadio just need to press up the search button to find these stations. The premium version adds unlimited jumps and a bunch of other features as well. Internet TV (Sling TV, Hulu, DirecTV etc) Price: Free / Varies! It's easier (and cheaper) to watch TV TV ever before. TV services like Hulu, Sling TV, YouTube TV, PlayStation Vue and DirecTV Now all have a bunch of excellent kid-friendly content. Consequently, they also have all access to the Disney Channel along with a bunch of back-logged-in Disney content. For example, on Hulu, if you subscribe to the live TV service, you get Disney Channel, but also access movies like Pocahontas. The amount of Disney content per streaming service varies, but you can at least get the actual channel on them all. Honestly, this is probably better than cable for Disney stuff because you get those on-demand titles as long as you subscribe to the live TV service. In addition, Disney has a Disney+, ESPN+, and Hulu subscription package for a pretty good price here. Movies Anywhere Price: Free / Movie prices vary Movies Anywhere is probably the best app for movies on Google Play. It's not its own standalone streaming service. It's actually a collection of other movie streaming services. You sign in with iTunes, Amazon, Vudu or Google Play. All the movies you purchased on all these services are now available in one place. The service has over 7,500 movies, and of course that includes tons of Disney movies along with basically all Marvel and Star Wars movies as well. Disney is probably going to have all these movies at Disney+ when it comes out. Until then, this is probably the best place to actually buy a Disney movie and watch it. The app is occasionally buggy, but it's otherwise pretty good. It also comes with Chromecast support. My Disney Experience / Disneyland Price: Free Disneyland and Disney World are two of the most popular resorts in the world. They also have official apps. The My Disney Experience app focuses primarily on Disney World. You can use it to plan your holiday, as an interactive map of the park, and you can even buy tickets and merch there. The Disneyland app is about the same way. The app shows you information such as estimated wait times, browser restaurant menus, and interacts with the park's maps. There are apps for all Disney parks individually, including those in Paris, Hong Kong and Shanghai. Those heading to Disney World or Disneyland should definitely have these apps on hand. Reddit Price: Free / \$3.99 per month / \$29.99 per year Reddit is good for many fan bases and Disney fans are no exception. The site has dozens of subreddits for Marvel properties, Star Wars movies, and, of course, classic Disney properties as well. You can talk to others who like what you like and post things you care about. The Reddit app keeps everything under moderate control, although people who haven't used Reddit before may have a tough time acclimatizing at first. In any case, this is a great way to read up on news about Star Wars, Marvel or other Disney properties and discuss these things with other fans. Your premium subscription removes advertising and gives you some additional features that Disney apps Price: Free (usually) We've said it over and over again that Disney is a big company. As it turns out, there are a number of official Disney apps for most of these properties. Some examples include the official Star Wars app, the official Marvel app, the ESPN app, ABC's official app, and the list goes on and on. These official apps are among the best ways to interact with Disney's massive list of media companies. For example, you can watch ABC programming on the ABC app or read about the latest Star Wars news in the Star Wars app. You can even read old Marvel comics in the Marvel app. It really depends on what kind of content each property does, but it's all Disney. YouTube Price: Free / \$12.99 per month YouTube is an excellent, albeit obvious, choice for a great Disney app. You can find basically any Disney song ever made there along with lots of clips and memes from various movies and TV shows. It's also the place to watch trailers for upcoming movies or shows, reviews of various toys or games, and basically everything else you can think of. Disney has an official VEVO channel with over 11 million subscribers. But again, you probably already knew all this, so this part of the list is really just some confirmation bias. Yes, YouTube is among the best apps for Disney fans. Alternatively, you can pay \$12.99 per month to remove ads, download videos for offline use, and you'll get some other features. If we missed some great Disney apps for Android, tell us about them in the comments! You can also click here to check out our latest Android app and game lists! Microsoft Launcher Google Now Apex We've chosen three great Android launcher options for you to check out. Microsoft Launcher is a clean and tidy solution, focusing on stylish looks and a handy button that you press one to change wallpapers using Bing's carefully selected daily photos. It comes with a neat sidebar where you get lots of useful widgets: recent and popular contacts, settings reminders, weather alerts and so on. The Arrow also has a swipe up from the bottom movement that brings a menu like Control Center on your iPhone, which is definitely useful (but this particular element in the launcher tends to originate on some phones). Google Now Launcher is probably the best way to get the stock and modern Android looks like Google even sees it. With the latest update, Google Now Launcher allows you to normalize icon sizes so that there are no longer large icons that contrast with a lot of tinier, and it even allows you to use your phone in landscape mode (which we find amazing). Apex Launcher has long been the premier Nova Launcher option, offering a similar level of depth and customization. Pixel Belle Delta Polycorn Take this iPhone users - you can change your icons on Android! If you are already using a custom you can download one of the many icon packs available in the Play Store (most are free or cost a We love the Pixel Icon Pack that brings the cool photos of Android Nougat to your device, and we've provided three of our latest favorites for you to check out, but feel free to explore the Play Store and find the one that suits your style best. Wallpapers of Google Muzel Wondenwall Unfortunately, most phones these days do not come with almost enough customization options out of the box, and often the choice of wallpapers built on the phone is very limited. Fortunately, there are some killer wallpaper apps on Android that can really make the screen come to life and feel... Individual. Wallpapers from Google is one of the best options with a selection of trendy wallpapers (including catchy satellite viewing of our beautiful planet Earth) that the app will rotate on a daily basis. Then we have Muzel, developed by Google engineering novel Nurik. Muzel has recently been updated and added integration with notification curtain icons in Android 7 Nougat, and it's more stable now. The app allows you to add a small blur to wallpapers so that the photo doesn't distract from your apps. This way you get a gradient-like look that sets a mood but does not distract. Last but not least we have Wallp, an app that has accumulated all stock wallpapers from different popular (and not so popular) phones. Needless to say, these are all very high quality wallpapers that are worth checking out. Zooper Zooper Widget provides one of the best options for fully customizable widgets: you can fit widgets to any background and style, as it is easy to choose different backgrounds, fonts and styles for clock, calendar, time, weather and a bunch of other information that is widget-capable. The other great widget app out there is KWGT, and both of these solutions come with lots of additions and extensions that will make your device unique and more functional via some creative widgets. Google Photo Google Photos brings a small revolution in image storage and sharing; it comes with unlimited cloud storage for photos up to 16 megapixels (and you can choose to downscale and highly compress larger images) and for videos up to 1080p. It also makes sharing photos and albums extremely easy and works just as well on all platforms: iOS, Android, the web and literally everything else with a web browser. Finally, it also has a brilliant new selection option that lets you drag your finger and use it as a computer mouse. Quite magically, it also allows you to search for (and actually find) photos by simply writing a few words like animals that will filter out all images of animals in your photo collection. Magic Google Photos is probably the most excellent app for keeping your photos in the cloud, but when it comes to simplicity in your organization, QuickPic is still the way to go on Android. Its overwhelmingly positive ratings show that simple works: it's a lightweight app with modern design, and it connects to online storage servers. Snapseed was acquired by Google a couple of years ago for good reason: it has an interface that allows you to edit photos on your phone very easily using an intuitive swipe-based interface. You have the powerful selective adjustment option, so you can tap a specific point and edit only a specific part of an image instead of the whole thing. Snapseed is ad-free, works fine, and is probably the best way to edit photos on Android. VSCO Cam is an app by Visual Supply Company, a company known for developing some of the best movie emulation filters for Adobe Lightroom, and it's no surprise that this expertise has resulted in a collection of some amazing filters that you can get in VSCO Cam. The beauty of VSCO filters (or presets either) is in the subtle measure of the artistic effects that will help you get a sense of the right amount of touch-ups needed for an image, and also help you avoid overediting your photos. CamScanner is a great app if you want to make sure that all the important documents you have are scanned and settled safely in the cloud (and by safe, we mean away from thieves, maybe not so much from the NSA). CamScanner allows you to scan them and change them to look like high-quality PDFs, not some cheap photos taken on your mobile phone. 500px Flickr EyeEm If you are searching for a place to share your photos, view other photos and participate in a photo forum that will improve your photography, 500px and Flickr are two of our favorite places to visit. Both have new and modern apps with great visual style and both run very smoothly on Android. A third option that we like to use is EyeEm, an app that provides more dynamic community where you get to see highlighted photographers and find inspiration. GoPro's move into software territory started with quick video editing app and it's an excellent solution that will automatically create engaging video collections that you can then easily share. Magisto is another well-established video maker who will add music and effects to your videos and freshen them up. VLC is known for being the video player that can easily chew through any kind of format with ease on the desktop, and it is similarly excellent on mobile. After years of testing, the app is out of beta and works solidly. Our previous favorite app, the MX player has been around for years and is still a great video player that we continue to use. The swipe-based interface is tailored for touch devices: Swipe left and right to skip backwards and fast forward; swipe up or down (on the right half of a device) to adjust the volume, and swipe up or down on the left half to adjust the brightness. Spotify needs little introduction. With the \$10 music subscription service, you can listen to more than 20 million songs unlimited and ad-free, a model that comes to replace the current buy-an-album. You also have Spotify for free that requires no paid subscription, but introduces ads and restrictions. Sometimes you do something as simple as trimming part of a song. We have found Lexis Audio Editor does a great job as a wave editor, so you can trim with precision and easily export your creations. If you are a djay, chances are you do not trust your phone, but in case you are on the go or something goes wrong, Android has djay2. The program works well on modern phones (and not so well on slightly older devices), and when it works it gives you many options: from slowing down and speeding up songs, to some resourceful mixing techniques. If you're in music production and want to make some beats on the go, Nanoloop is one of our favorite tools on Android. Nanoloop combines sequencer, synthesizer and sampler in a package, and it's a very minimal but beautifully made tool for creating electronic music. Then, if you're a music pro looking for an app that helps you edit more complex projects, you can always rely on Caustic 3 and FL Studio Mobile. These complex apps will work better on a well-run tablet, where the extra screen space is a welcome addition. Signal is a messaging app that allows you to have private conversations via both text messages and voice calls. It's free, supports group chats and texts, and allows you to share media. Best of all, it's open source, so you can rest assured that all encryption is done in a timely manner, and the ever longer hands of government won't reach your private life. The server also never has access to any of your communications and never stores data. The creator of the Russian social network VK.com Pavel Durov has now been officially removed from running his own product, but he has focused on creating Telegram, a secure messaging app. The app uses encryption, and while it's not as hard-proof as Signal, it's a popular solution that seems safer than most other messengers out there. AccuBattery is a detailed battery application that provides a screen-on battery life estimate for your device and is very useful for nailing down which app uses how much battery resources. It is simple, well designed and it is both a free and a paid option (we recommend getting the latter). Greenify is a simple battery management app that ensures that no app abuses the system by taking up too much of its resources. It warns you about it and allows you to keep track of your battery life. BitDefender Norton Avast Let's make one thing clear: Unless you go into some third-party apps or open shady files you don't know anything about, there's no need to worry about antivirus apps on Android. The smart sandbox mechanism the platform is built on, making Android very secure. Nevertheless, if you have any doubts about your device, these three are the best anti-virus apps around. BitDefender comes at a hefty price but does an excellent job, while Norton is a freemium app that you can explore, and Avast is a nice third option to have. Google Drive is deeply integrated into the Android platform and it is an excellent service. We rarely use cables for transfer files these days; just send them to this neat app with 15GB of free storage that would be sufficient for many people. You can also buy a \$2/month plan that gives you 100 GB of space, or shell out \$10 monthly for 1 TB of cloud storage. Then you have Dropbox that also offers an easy-to-use app with a 1TB storage option that costs \$200 a year. It's an equally excellent choice, and it's up to you to decide which one you like better (we stick to Google Drive because of how it integrates with other Google services). Asus File Manager File Explorer Astro Google's new Files Go file management app may still be in beta, but it works well, has a clean interface and comes with superpowers like the ability to quickly send large files between two devices. It also helps you free up storage space on your device easily. Other options worth considering are the following: Asus' File Manager app allows you to get to your files in an organized way, and it's free and feature rich. Our other two go-to options are NextApp's File Explorer or Astro File Manager, which provides a slightly different design but very similar functionality. We recently learned that AirDroid, our go-to app for wirelessly transferring files between our laptops and phones, was not as secure as it should have been. Some updates have happened in the meantime, but this was enough to push it to second place, behind the pretty excellent AirMore which provides an almost identical functionality, without all the fluff that AirDroid has added recently. LastPass keeps your password and personal information safe. Lock your passwords in a secure vault, autofill browser and app logins, and generate new, secure passwords. With LastPass, you remember only one password — your LastPass master password. Save logins, create online shopping profiles, generate strong passwords, track personal information in photo and audio notes, and more. 1Password, on the other hand, creates strong passwords for each site, and remembers them. If you're having trouble remembering all the different passwords you use, 1Password will do it for you. The new version of the app is full-fledged and will work on both phones and tablets. And if there is one thing that we continue to learn over the years, it is that security is the number one concern that mobile devices users have. With this program you can use ridiculously complex passwords (as generated by 1Password), and you can let the app remember them. A virtual private network (VPN) is a great tool for power users for all sorts of cases: from security, to accessing content that for some reason can be blocked in a particular area. Opera Free VPN is our favorite Android VPN app for its simplicity and unbeatable price tag for free for the base version. You also have Turbo VPN as an option, another good established program that will do the job well. If you are used to using torrent files for some reason, Flud is probably the best BitTorrent client out there: clean, simple, without upload restrictions, follow the material design directives carefully. It allows you to choose which specific files of torrent to download, gives you file and folder priorities, and has magnetic link support. We give you two options to turn your phone into smart remote control: either for the goal of controlling something on your laptop/desktop, or whether your phone has an infrared beamer to control your TV or air conditioner. Sometimes laziness can feel good. 7 minutes of exercise Finally, given that we have our phones always in our pockets, it is worth using them for something that will actually benefit our health: for our workouts. We have a hard time recommending a full-fledged gym app for phones since we think that a gadget has no place in the gym where you exercise, but for light exercise and as a reminder to go for a run or do the famous 7-minute workouts to give you energy while in the office, Runkeeper and 7-Minute Workout are two great programs. ESPN theScore Bleacher Report ESPN has rolled out a completely redesigned app for Android that has beautifully simplified user-friendly style and allows you to easily stay informed about the latest news around your favorite sports team. Not only that, you get few few get updates about live scores on games, as well as a news section that comes with many videos. The focus of the new ESPN app is the following leagues: MLB, NFL, College Football, NBA, College Basketball, MLS, Cricket and more. If you want more scores, news and analysis, TheScore excels first, while Bleacher Report does very well in the latter two. Moves is a motion tracking app with a simple interface, but most importantly, it doesn't require you to constantly mess around with it. Just start it once and you'll track steps, stations, cycling and driving in the background. In addition, it will also map your daily activity on a map. The fact that the app has been acquired by Facebook testifies that you get a slim and smooth experience. We have all these periods when you get sick, and suddenly find yourself taking a handful of medications to get better before. Medisafe's Meds and Pills Reminder will help you keep track of when these medications are due easily and easily. Clue Period Tracker is the best program to track your period, and while you probably won't care if you're a guy, your girlfriend will certainly appreciate you showing this useful app to her. Hopper Hopper is a cool airfare service that sends you alerts when the time is right to buy a ticket, based on algorithms that predict whether prices are likely to go up, down or stay sideways in the near future. That's not all there is for the new Hopper for Android, though, as it has one of the most comfortable to use designs we've seen from such apps, without unnecessary features and distractions, and with large, easy-to-tap icons, entry fields and calendars. Hopper will feed you only when the prices of our place to choose prices has hit the lowest place and is about to rise, so check it if you travel, it can save you quite a few dollars on flights. We also like Skyscanner with its eagle-eye view of different flight and ticket sellers, and it also comes with the promise to give you the best price for your flight. Fashionistas, until! Well, at least take a look at these two apps that will give you lots of cool new ideas about dressing up and styling it up. Houzz Houzz is a great hub for ideas for home design and renovation with a myriad of images that will help you visualize what you want to construct or change before making many mistakes on your own first. With an excellent write-up in the form of a weekly newsletter, Houzz has become our go-to place for those times when just changing something at home can help us understand the chaos of our minds. Feedly Yahoo News Digest Google News The new Yahoo under Marissa Mayer is an interesting concoction of a technology and a media company, and the Yahoo News Digest program is a brilliant illustration of the direction in which Yahoo is going. The app is elegant and with thoughtful curation of human editors presents it with a morning and evening digests of the most important news from around the world. We love the idea of having around 10 news articles for each summary; you can quickly scroll between the leading topics, and get a sense of completion that news junkies, who otherwise tend to spend much more time digging for news, will appreciate. If you're someone who reads news like a job or a serious hobby, there's no better way to stay up to date on everything that's happening than a full-blown newsreader. Following the pitiful demise of Google Reader, Feedly has emerged as the number one option with regular updates, smooth interfaces and even a premium level that offers even more functionality. GasBuddy Here is a useful app that is simply important for travelers who want to fill up to the cheapest price of any place: GasBuddy. This neat little app is especially useful in the US, where you can use it to find the gas station that offers the best deal of them all. Why do you need it? Well, if you never leave your hometown and already know all the gas stations there, you probably don't, for everything else the reasons seem pretty obvious. Duolingo has brought a small revolution to language acquisition on a mobile device. The simple, repetitive approach works well for introducing you to a language in all four of its incarnations: reading, writing, speaking and listening. Duolingo currently allows you to learn Spanish, French, German, Portuguese, Italian, Dutch, Irish, Danish, Swedish and English. We look forward to a similarly easy way to learn Asian languages! Khan Academy has collected a large number of lessons in both text and video to help you catch with all sorts of subjects: from basic mathematics to more complicated calculus, all explained in a system that allows you to only after you mastered the content required. It's a great way to learn, especially for science, but it also applies to art. Khan Academy offers articles in mathematics (arithmetic, pre-algebra, algebra, geometry, trigonometry, statistics, calculus, linear algebra), science (biology, chemistry, physics), economics, and even the humanities with tutorials on art history, civics, finance, and more. Tinder Bumble OKCupid Everyone is on Tinder these days and that's what makes this simple hot or not app be a good choice for those looking for a date, and maybe something more. We're not big fans of the superficial approach to people who are at the core of Tinder, but at the end of the day it's up to you to shape your relationship with people. IMDb is the world's largest film database, and as such it is an indispensable tool for movie enthusiasts. Movie trailers, actors, reviews and all sorts of flick paraphernalia adorn IMDb's free movie app, more than enough to give it a place in this list. Tasty has come and taken over the cooking app world as a storm: suddenly and unexpectedly. It's a great little app with its cool videos and it's our best choice for most people out there. Yummly is our second favorite application for cooking, and while there are many others that are equally good, we highlight Yummly because of its amazing filters that allow you to discover dishes from different styles and dishes easily. SimpleFeast is a more sophisticated application with a paid level for those who want recipes from proven chefs and with proven excellence. Then we also have the neat simple recipe book which is also a great option. Yelp is another service that has grown thanks to the excellent reviews of users. Whether it's reviews for a gym club or a restaurant, chances are that Yelp will help you make the right choice not only in the United States, but in most English-speaking territories. Territories.
